

SEEBURGER Business Integration Suite centralizes corporate B2B/EDI for URSA

With digital signature capabilities for exchanging invoices customized to different countries' legal requirements

URSA is a company dedicated to the manufacture and commercialization of thermal and acoustic insulating materials oriented towards sustainability and energy efficiency in building headquartered in Madrid, Spain. URSA is running SEEBURGER Business Integration Server platform on a central infrastructure for managing all European URSA B2B company processes and integrating with SAP, its corporate ERP system. URSA, a SEEBURGER customer since 2004, manages B2B/EDI processes with more than 60 trading partners using heterogeneous communication protocols. URSA needed to consolidate their different solutions to manage B2B/EDI processes and

to implement integration between the plants. They have added digital signature capabilities for exchanging invoices customized to different countries' legal requirements. URSA also use SEEBURGER for monitoring of all their daily B2B/EDI processes.

Main benefits for URSA is that they have a centralized solution with all the plants integrated, simplified trading partner management and the possibility to use different communications protocols.

Next step for URSA is to upgrade to the latest version of BIS6 to be able to further develop their B2B/EDI integration.

“ SEEBURGER BIS has been the perfect partner for URSA to support and monitor all our daily processes. The integration of all our businesses and trading partners has allowed us to be more efficient and to proactively act if any issue would come. ”

Alberto Olmos, URSA Applications Manager – AT SUGGESTED TESTIMONIAL
